

2. Exploit SSRF to breach our security!

We've been working on improving our security, and now it's time to see how well it holds up. We're especially focused on weaknesses that could allow unauthorized requests on the server **SSRF** vulnerabilities. By putting our system through rigorous testing, we'll identify any areas that need more protection. Let's find the chinks in our armor before anyone else does!

It's time to pentest our added security by probing the SSRF vulnerability.

This stage also focuses on the SSRF vulnerability within the check reduction functionality. The **articleApi** parameter is vulnerable, and your goal is to exploit it to gain access to the internal admin dashboard.

- Target Application: [ShopAdmin](#)
- Initial Endpoint: `http://web0x08.hbtn/app3/`

Useful instructions:

1. Log into ShopAdmin, it is a shopping website, there is a lot of article.
2. The challenge is about the SSRF vulnerability in **check** reduction functionality.
3. You can click on one article **and** we see that we can do a **check** reduction.
4. Param `articleApi` is vulnerable.
5. This App is Forwarded on Port 3002
